Education

Wentworth Institute of Technology (WIT), Boston, MA

August 2026

Bachelor of Science in Computer Science

Minor: Applied Mathematics

Relevant Courses: Algorithms, Machine Learning, Data Structures, Security Principles, Malware Analysis

Technical Skills

Programming Languages: MATLAB, C, C#, C++, Java, Python, JavaScript, HTML, CSS, SQL, Perl, F#, R

Software: Eclipse, Spyder, Kali Linux, Ubuntu, Visual Studio Code, VMware, ServiceNow, Cisco Duo, Okta Verify, Bomgar, Adobe Creative Suite, Microsoft Office

Certifications: Learning Java 11, Python Essential Training, Complete Guide to C Programming Foundations, HTML Essential Training, JavaScript Essential Training, SQL Essential Training, Pharmaceutical Technician

Projects

AI-Powered Malware Triage System | Python, FastAPI, VirusTotal API

Summer 2026

- Built a human-in-the-loop triage service with a project partner that accepts security alerts over a FastAPI REST endpoint, validates them against Pydantic schemas, and returns a severity score, extracted indicators, mapped MITRE ATT&CK techniques, and recommended mitigations.
- Implemented regex-based IOC extraction for SHA-256/SHA-1/MD5 hashes, URLs, domains, and IPv4 addresses with RFC 1918 and reserved-range filtering to reduce false positives, then enriched each indicator through the VirusTotal v3 API with graceful degradation on quota, authentication, and connectivity failures.
- Designed a deterministic weighted scoring model (behavior up to 50 points, threat intelligence up to 30, source confidence up to 20) across four severity bands, keeping scoring out of the language model entirely; the optional LLM generates summaries only and falls back to a local summarizer when unavailable.

Healthcare Prior-Authorization Workflow System | NeighborHealth

Spring 2026

- Collaborated on a multi-team effort to design a modular prior-authorization workflow application for a real healthcare client, structuring the system into distinct modules for case intake, completeness validation, prior-authorization packet generation, and automated testing.
- Engineered referral validation logic that generates payer- and procedure-specific checklists, flags missing or invalid items with explanations, and enforces a human approval gate before packet export to ensure HIPAA-compliant handling of patient data.
- Defined clear interface contracts and audit-logging requirements across modules, recording key workflow events such as case creation, status transitions, approvals, and exports to support traceability and reliable integration testing.

Experience

Wegmans Pharmaceutical Technician

February 2025 - Present

- Medication Dispensing & Customer Service: Accurately prepare and dispense prescriptions, provide expert guidance to customers on medication usage, and address health inquiries.
- Sensitive Data Management: Enter and manage sensitive patient data in the pharmacy database, ensuring confidentiality and compliance with HIPAA regulations.
- Team Collaboration & Efficiency: Work closely with pharmacists and staff to optimize workflow, maintain safety standards, and deliver exceptional patient care.

Harvard University Technical Support Engineer

August 2025 – December 2025

- Provided Tier 1 and Tier 2 technical support for Windows and macOS systems, resolving hardware, software, networking, and account-related issues through in-person and remote support using ServiceNow.
- Imaged, configured, and deployed Windows and Apple devices using SCCM and JAMF; performed asset tracking, system updates, data migration, and new computer setups for faculty, staff, and students.
- Delivered high-level customer service while supporting students, faculty, and staff across multiple departments; identified IT trends, documented solutions, and assisted with lab and equipment support.
